DOCUMENT INFORMATION

Document Name	Agile Requirements Documentation
Project Name	Customer Ticket Management System
Document Version	1.0
Prepared By	Shivani Pal
Role	Business Analyst
Methodology	Agile Scrum
Document Status	Draft
Prepared Date	July 12, 2026
Classification	Confidential

VERSION HISTORY

Purpose

The Version History section records all changes made to the document throughout the project lifecycle. It provides traceability, ensures version control, and helps stakeholders understand the evolution of project requirements over time.

Version	Date	Author	Description	Approved By
1	July 12, 2026	Shivani Pal	Initial Draft	Product Owner
1.1			Requirement Updates	
1.2			User Story Refinements	
2			Final Release	

INTRODUCTION

Purpose

This Agile Requirements Document (ARD) captures the user stories, acceptance criteria, and functional requirements for the Customer Ticket Management System (CTMS). It serves as a common reference for stakeholders, developers, testers, and the Scrum Team throughout the Agile development lifecycle.

Project Overview

The Customer Ticket Management System (CTMS) is a web-based application that enables customers to create, track, and manage support tickets while allowing support teams to assign, prioritize, and resolve issues efficiently. The project follows the Agile Scrum methodology, delivering features incrementally across multiple sprints.

BUSINESS PROBLEM STATEMENT

Many organizations manage customer support requests through emails, spreadsheets, and phone calls, resulting in delayed responses, duplicate tickets, poor visibility, and inefficient issue tracking. CTMS addresses these challenges by providing a centralized platform for ticket creation, assignment, tracking, escalation, and reporting, improving operational efficiency and customer satisfaction.

PRODUCT VISION

Vision Statement

To build a centralized, user-friendly Customer Ticket Management System that enables organizations to deliver faster, transparent, and efficient customer support through automation, real-time tracking, and data-driven decision-making.

BUSINESS OBJECTIVES

The Customer Ticket Management System aims to achieve the following objectives:

- Reduce ticket resolution time through workflow automation.
- Improve customer satisfaction with real-time ticket tracking.
- Centralize customer issue management.
- Automate ticket assignment and escalation.
- Improve operational visibility through dashboards and reports.
- Support data-driven business decisions.

PROJECT SCOPE

➤ In Scope

The first release (MVP) of the Customer Ticket Management System will include the essential functionalities required for effective customer support management.

The project scope includes:

- Customer Registration and Login
- Ticket Creation
- Ticket Assignment
- Ticket Status Tracking
- Ticket Reassignment
- Ticket Escalation
- Email Notifications

- Customer Dashboard
- Agent Dashboard
- Reporting & Analytics
- Role-Based Access Control

➤ **Out of Scope**

The following features are excluded from the current release and may be considered in future versions of the application:

- AI Chatbot Integration
- Voice Call Support
- WhatsApp Integration
- Multi-language Support
- Mobile Application
- Predictive Ticket Routing
- Third-party CRM Integration

STAKEHOLDERS

Purpose

Stakeholders are individuals or groups who influence, use, or are affected by the Customer Ticket Management System (CTMS). Identifying stakeholders ensures that business requirements are captured accurately and aligned with business objectives.

Stakeholder Details

Stakeholder	Role	Responsibilities	Interest
Customer	End User	Create support tickets, track ticket status, communicate with support team, and provide feedback after issue resolution.	High
Support Agent	Support Team	View assigned tickets, communicate with customers, update ticket status, and resolve customer issues.	High
Support Manager	Team Lead	Monitor ticket queue, manage agent workload, approve escalations, track SLA compliance, and review reports.	High
System Administrator	Administrator	Manage users, roles, permissions, system settings, and maintain overall platform security.	High
Product Owner	Business Owner	Define business requirements, prioritize features, approve product backlog, and ensure business value.	High

Business Analyst	Requirement Analyst	Gather requirements, document user stories, prepare acceptance criteria, facilitate stakeholder discussions, and bridge communication between business and development teams.	High
Development Team	Software Engineers	Design, develop, integrate, and deploy system features based on approved requirements.	Medium
QA/Test Engineers	Testing Team	Validate system functionality, perform testing, log defects, and ensure quality before production release.	Medium
Management	Business Leadership	Review dashboards, monitor operational performance, analyze reports, and make strategic decisions.	Medium

STAKEHOLDER MATRIX

Purpose

The Stakeholder Matrix classifies stakeholders based on their level of power and interest, helping define appropriate communication and engagement strategies throughout the project lifecycle.

Stakeholder Power–Interest Matrix

Stakeholder	Power	Interest	Engagement Strategy
Product Owner	High	High	Manage Closely
Support Manager	High	High	Manage Closely
Business Analyst	High	High	Manage Closely
System Administrator	High	Medium	Keep Satisfied
Development Team	Medium	High	Keep Involved
QA Team	Medium	High	Keep Involved
Customer	Low	High	Keep Informed
Support Agent	Low	High	Keep Informed
Management	High	Medium	Keep Satisfied

USER PERSONAS

Purpose

User Personas are fictional representations of the primary users of the Customer Ticket Management System (CTMS). They help the Business Analyst understand user needs, pain points, motivations, and expectations, ensuring the product is designed to solve real business problems and deliver an improved user experience.

Persona 1 – Customer

Profile

Attribute	Details
Name	Rahul Sharma
Age	29 Years
Occupation	Software Engineer
Location	Bangalore, India

Technical Proficiency	High
Primary Device	Mobile & Laptop

Goals

- Raise support tickets easily.
- Track ticket progress in real time.
- Receive timely issue resolution.
- Get email notifications for every status update.

Pain Points

- Long waiting time for support.
- No visibility into ticket progress.
- Repeating the same issue multiple times.
- Delayed communication from support teams.

Quote

"I just want to know what's happening with my request without contacting support repeatedly."

Persona 2 – Support Agent

Profile

Attribute	Details
Name	Priya Singh
Age	31 Years
Occupation	Customer Support Executive
Experience	6 Years
Technical Proficiency	High

Goals

- Resolve customer issues quickly.
- Prioritize high-priority tickets.
- Communicate effectively with customers.
- Reduce ticket resolution time.

Pain Points

- High ticket volume.
- Manual ticket assignment.
- Missing ticket history.
- Lack of priority indicators.

Quote

"An organized ticket queue helps me solve more issues with better customer satisfaction."

Persona 3 – Support Manager

Profile

Attribute	Details
Name	Amit Verma
Age	29 Years
Occupation	Customer Support Manager
Experience	12 Years
Technical Proficiency	Medium-High

Goals

- Improve team performance.
- Maintain SLA compliance.
- Reduce ticket backlog.
- Increase customer satisfaction.

Pain Points

- Uneven workload among agents.
- Missed SLA deadlines.
- Limited reporting visibility.
- Delayed escalations.

Quote

"The right insights help me make faster decisions and improve support performance."

Persona 4 – System Administrator

Profile

Attribute	Details
Name	Neha Kapoor
Age	35 Years
Occupation	System Administrator
Experience	9 Years
Technical Proficiency	Expert

Goals

- Ensure uninterrupted system availability.
- Manage user roles securely.
- Configure application settings.
- Maintain system security.

Pain Points

- Manual user management.
- Security risks.
- Permission conflicts.
- Configuration errors.

Quote

"A secure and stable system allows everyone to work efficiently."

PRODUCT ROADMAP

Purpose

The Product Roadmap provides a high-level view of planned feature releases for CTMS, ensuring alignment between business goals and development priorities.

Product Roadmap Timeline

Phase	Timeline	Key Deliverables
Phase 1 – Foundation	Sprint 1–2	User Authentication, Role-Based Access Control, Customer Registration, Ticket Creation
Phase 2 – Core Ticket Management	Sprint 3–4	Automatic Ticket Assignment, Ticket Status Updates, Ticket Search & Filters, Email Notifications
Phase 3 – SLA & Reporting	Sprint 5–6	SLA Monitoring, Ticket Escalation, Daily/Weekly/Monthly Reports, Manager Dashboard
Phase 4 – Future Enhancements	Future Release	AI-based Ticket Categorization, Chat Support Integration, Mobile Application, Advanced Analytics Dashboard

Roadmap Visualization

EPIC OVERVIEW

Purpose

An Epic represents a major business capability of the Customer Ticket Management System. Each Epic is further divided into multiple features and user stories that are delivered incrementally during Agile sprints.

Epic Summary

Epic ID	Epic Name	Business Objective	Priority
EPIC-01	User Authentication & Access Management	Enable secure login and role-based access for all users.	High

Epic ID	Epic Name	Business Objective	Priority
EPIC-02	Ticket Management	Allow customers to create, update, track, reopen, and close support tickets.	High
EPIC-03	Ticket Assignment & Escalation	Automate ticket assignment and escalation based on predefined business rules and SLA.	High
EPIC-04	Notifications & Communication	Keep customers and support teams informed through automated email notifications and status updates.	Medium
EPIC-05	Reporting & Analytics	Provide dashboards and reports to monitor support performance, SLA compliance, and operational metrics.	High
EPIC-06	Administration & System Configuration	Enable administrators to manage users, roles, permissions, and system settings.	Medium

FEATURE BREAKDOWN

Purpose

The Feature Breakdown organizes each Epic into smaller functional features that form the basis for Product Backlog creation and User Story development.

Feature Breakdown Overview

Epic ID	Epic Name	Feature ID	Feature Name	Priority
EPIC-01	User Authentication & Access Management	F-01	User Registration	High
		F-02	User Login	High
		F-03	Forgot Password	Medium
		F-04	Role-Based Access Control	High
EPIC-02	Ticket Management	F-05	Create Ticket	High
		F-06	View Ticket Details	High
		F-07	Update Ticket	High
		F-08	Close Ticket	Medium
		F-09	Reopen Ticket	Medium
EPIC-03	Ticket Assignment & Escalation	F-10	Automatic Ticket Assignment	High
		F-11	Manual Ticket Assignment	Medium
		F-12	Priority Management	High
		F-13	SLA Monitoring	High
		F-14	Ticket Escalation	High
EPIC-04	Notifications & Communication	F-15	Email Notifications	High
		F-16	Status Update Alerts	High
		F-17	Assignment Notifications	Medium
		F-18	Resolution Notifications	Medium
EPIC-05	Reporting & Analytics	F-19	Dashboard	High
		F-20	Daily Reports	Medium
		F-21	Weekly Reports	Medium
		F-22	Monthly Reports	High
		F-23	Agent Performance Report	Medium
EPIC-06	Administration & System Configuration	F-24	User Management	High
		F-25	Role Management	High
		F-26	Category Management	Medium

Epic ID	Epic Name	Feature ID	Feature Name	Priority
		F-27	SLA Configuration	High
		F-28	System Settings	Medium

Feature Prioritization

Priority	Features
High	Registration, Login, RBAC, Create Ticket, View Ticket, Update Ticket, Auto Assignment, Priority Management, SLA Monitoring, Ticket Escalation, Email Notifications, Dashboard, Monthly Reports, User Management, Role Management, SLA Configuration
Medium	Forgot Password, Close Ticket, Reopen Ticket, Manual Assignment, Assignment Notifications, Resolution Notifications, Daily Reports, Weekly Reports, Agent Performance Report, Category Management, System Settings

PRODUCT BACKLOG

Instead of going directly to **Story Mapping**, let's add **Product Backlog** first because that's how Agile projects typically flow.

Backlog ID	Epic	Feature	Priority	Story Points	Sprint	Status
PB-001	Authentication	User Registration	High	5	Sprint 1	Ready
PB-002	Authentication	User Login	High	3	Sprint 1	Ready
PB-003	Ticket Management	Create Ticket	High	8	Sprint 1	Ready
PB-004	Ticket Management	View Ticket	High	5	Sprint 1	Ready
PB-005	Ticket Management	Update Ticket	Medium	5	Sprint 2	Planned

USER STORIES & ACCEPTANCE CRITERIA

US-001 – User Registration

As a Customer, I want to register a new account

So that I can access the Customer Ticket Management System.

Priority: High

Story Points: 5

Sprint: Sprint 1

Dependencies: None

Business Value: High

Acceptance Criteria

- User should be able to register using valid details.
- Mandatory fields must be validated.
- Duplicate email addresses should not be allowed.
- A success message should be displayed after successful registration.

US-011 – Search Tickets

As a Support Agent, I want to search tickets using Ticket ID, customer name, or ticket status

So that I can quickly locate and manage customer requests.

Priority: High

Story Points: 5

Sprint: Sprint 2

Dependencies: User Login, Ticket Creation

Business Value: High

Acceptance Criteria

- Support Agent should be able to search using Ticket ID.
- Search should support customer name and ticket status.
- Matching tickets should be displayed accurately.
- A "No Records Found" message should appear if no results exist.

US-012 – Filter Tickets

As a Support Agent, I want to filter tickets based on priority, category, status, and assigned agent

So that I can focus on the most relevant support requests.

Priority: Medium

Story Points: 3

Sprint: Sprint 2

Dependencies: Search Tickets

Business Value: Medium

Acceptance Criteria

- Agent should be able to apply one or multiple filters.
- Only matching tickets should be displayed.
- Applied filters should be visible to the user.
- Reset should clear all filters and display all tickets.

US-013 – Add Internal Notes

As a Support Agent, I want to add internal notes to support tickets

So that other team members can understand the ticket history without exposing comments to customers.

Priority: Medium

Story Points: 3

Sprint: Sprint 3

Dependencies: View Ticket Details

Business Value: Medium

Acceptance Criteria

- Support Agent should be able to add internal notes.
- Notes should be saved successfully.
- Internal notes should only be visible to support staff.
- Customers should not be able to view internal notes.

US-014 – Customer Feedback

As a Customer, I want to submit feedback after my support ticket is resolved

So that I can rate my support experience and help improve service quality.

Priority: Medium

Story Points: 5

Sprint: Sprint 3

Dependencies: Ticket Closure

Business Value: Medium

Acceptance Criteria

- Feedback option should be available only after ticket closure.
- Customer should be able to submit a rating and comments.
- Submitted feedback should be stored successfully.

- A confirmation message should be displayed after submission.

BUSINESS RULES

Purpose

Business Rules define the policies, constraints, and conditions that the Customer Ticket Management System (CTMS) must follow to ensure consistent and accurate business operations.

BR-001 User Registration

- Every user must register with a unique email address.
- All mandatory fields must be completed before registration.
- Email addresses must be unique across the system.

BR-002 User Authentication

- Only registered users can log in.
- Users must enter valid credentials to access the system.
- Access permissions shall be based on assigned user roles.

BR-003 Ticket Creation

- Every ticket must have a unique Ticket ID.
- Customers must select a category and priority while creating a ticket.
- Mandatory fields cannot be left blank.

BR-004 Ticket Assignment

- Newly created tickets shall be automatically assigned to an available Support Agent.
- Support Managers can manually reassign tickets when required.

BR-005 Ticket Status

Tickets can only move through the following statuses:

Open → Assigned → In Progress → Resolved → Closed

Closed tickets may be reopened only by the customer or Support Manager.

BR-006 SLA Management

- SLA timers begin when a ticket is created.
- High-priority tickets must be resolved before lower-priority tickets.
- Tickets exceeding SLA limits must be escalated automatically.

BR-007 Notifications

- Customers shall receive email notifications whenever ticket status changes.
- Support Agents shall receive notifications for newly assigned tickets.

BR-008 Reporting

- Dashboards must display real-time ticket statistics.
- Reports shall be generated Daily, Weekly, and Monthly.

BR-009 Security

- Users can access only data permitted by their assigned role.
- Internal notes are visible only to support staff.

BR-010 Customer Feedback

- Feedback can only be submitted after ticket closure.
- One feedback submission is allowed per ticket.

DEFINITION OF READY (DOR)

Purpose

The Definition of Ready (DoR) specifies the minimum criteria that a User Story must meet before it can be selected for Sprint Planning. It ensures that the development team has sufficient information to begin implementation without ambiguity.

Definition of Ready Checklist

Criteria	Status
User Story is clearly defined	✓
Business value is identified	✓

Criteria	Status
Acceptance Criteria are documented	✓
Dependencies are identified	✓
Priority is assigned	✓
Story Points are estimated	✓
Product Owner has reviewed the story	✓
Development Team understands the requirement	✓

DEFINITION OF DONE (DOD)

Purpose

The Definition of Done (DoD) defines the criteria that must be met before a User Story is considered complete. It ensures that all development, testing, and quality standards have been fulfilled before the feature is released.

Definition of Done Checklist

Criteria	Status
Development completed	✓
Code reviewed and approved	✓
Unit Testing completed	✓
QA Testing completed	✓
Acceptance Criteria satisfied	✓
No Critical or High Severity defects	✓
Product Owner approval received	✓
Ready for Release	✓

STORY ESTIMATION

Purpose

Story Estimation helps the Scrum Team estimate the effort, complexity, and risk associated with implementing each User Story. The CTMS project uses the **Fibonacci Story Point** technique during Sprint Planning.

Story Point Scale

Story Points	Complexity	Estimated Effort
1	Very Low	Few Hours
2	Low	Less than 1 Day

Story Points	Complexity	Estimated Effort
3	Medium	1–2 Days
5	High	2–4 Days
8	Very High	4–7 Days
13	Complex	Requires Breakdown

Story Estimation Summary

Story ID	User Story	Story Points
US-001	User Registration	5
US-002	User Login	3
US-003	Forgot Password	2
US-004	Role-Based Access	5
US-005	Create Ticket	5
US-006	View Ticket	3
US-007	Update Ticket	5
US-008	Close Ticket	2
US-009	Reopen Ticket	3
US-010	Auto Ticket Assignment	8
US-011	Search Tickets	5
US-012	Filter Tickets	3
US-013	Add Internal Notes	3
US-014	Customer Feedback	5

SPRINT PLANNING

Purpose

Sprint Planning defines the scope of work for each sprint by selecting user stories from the Product Backlog based on business priority, team capacity, and estimated effort.

Sprint Plan Overview

Sprint	Duration	User Stories	Sprint Goal
Sprint 1	2 Weeks	US-001, US-002, US-003, US-004	Implement user authentication and secure system access.
Sprint 2	2 Weeks	US-005, US-006, US-007, US-011, US-012	Enable ticket creation, management, search, and filtering.
Sprint 3	2 Weeks	US-008, US-009, US-010, US-013, US-014	Complete ticket lifecycle, assignment, and customer feedback features.

SPRINT BACKLOG

Purpose

The Sprint Backlog contains the list of User Stories selected for implementation during each sprint. It helps the Scrum Team track progress and ensures that sprint goals are achieved within the planned timeline.

Sprint 1 Backlog

Story ID	User Story	Priority	Story Points	Assignee	Status
US-001	User Registration	High	5	Developer	Done
US-002	User Login	High	3	Developer	Done
US-003	Forgot Password	Medium	2	Developer	Done
US-004	Role-Based Access Control	High	5	Developer	Done

Sprint 2 Backlog

Story ID	User Story	Priority	Story Points	Assignee	Status
US-005	Create Ticket	High	5	Developer	Done
US-006	View Ticket	High	3	Developer	Done
US-007	Update Ticket	High	5	Developer	Done
US-011	Search Tickets	High	5	Developer	Done
US-012	Filter Tickets	Medium	3	Developer	Done

Sprint 3 Backlog

Story ID	User Story	Priority	Story Points	Assignee	Status
US-008	Close Ticket	Medium	2	Developer	Done
US-009	Reopen Ticket	Medium	3	Developer	Done
US-010	Automatic Ticket Assignment	High	8	Developer	Done
US-013	Add Internal Notes	Medium	3	Developer	Done
US-014	Customer Feedback	Medium	5	Developer	Done

WIREFRAMES

Overview

The following low-fidelity wireframes illustrate the proposed user interface for the Customer Ticket Management System (CTMS). These wireframes were created during the requirements analysis phase to

visualize the user journey, validate requirements with stakeholders, and support the development team during implementation.

23.1 Login Screen

Purpose: Enables registered users to securely access the CTMS application.

23.2 Dashboard

Purpose: Displays an overview of ticket statistics, assigned tasks, and recent activities.

23.3 Create Ticket

Purpose: Allows customers to create a new support ticket by providing issue details.

The screenshot shows a web browser window titled "Create Ticket". The browser's address bar contains navigation icons (back, forward, refresh) and window management icons (menu, star, user, close). The page content is titled "Create New Ticket". It features five input fields: "Issue Category" (a single-line text box with "Input field" text), "Priority" (a dropdown menu showing "High"), "Subject" (a single-line text box with "Input field" text), "Description" (a multi-line text area with "Input field" text), and "Attachment" (a button labeled "[Upload File]"). At the bottom right of the form is a dark button labeled "Submit Ticket".

23.4 Ticket Details

Purpose: Displays complete ticket information, status updates, and communication history.

The screenshot shows a web browser window titled "Ticket Details". The browser's address bar contains navigation icons (back, forward, refresh) and window management icons (menu, star, user, close). The page content is titled "Ticket Details:". It features a summary box containing the following information: Ticket : #1023, Status : In Progress, Assigned Agent : Alex, Priority : High, and Customer : John Smith. Below this box are two input fields: "Issue Description" (a single-line text box with "Input field" text) and "Comments" (a multi-line text area with "Input field" text). At the bottom center of the form is a dark button labeled "Resolve Ticket".

23.5 Admin Dashboard

Purpose: Allows administrators to manage users, monitor system performance, and generate reports.

USER ACCEPTANCE TESTING (UAT)

24.1 Overview

User Acceptance Testing (UAT) is conducted to verify that the Customer Ticket Management System (CTMS) meets the defined business requirements and fulfills stakeholder expectations. During this phase, business users validate the application's functionality to ensure that all critical business processes operate as intended before deployment.

24.2 UAT Objectives

- Validate that the system meets business requirements.
- Ensure all user stories are successfully implemented.
- Verify end-to-end business processes.
- Confirm that the application is user-friendly and meets stakeholder expectations.
- Identify any defects before production deployment.

24.3 Entry Criteria

- All planned development activities are completed.
- Functional testing has been successfully completed.
- Critical defects have been resolved.
- Test environment is available.
- Test data has been prepared.

24.4 Exit Criteria

- All planned UAT scenarios have been executed.
- Critical and high-priority defects have been resolved.
- Business stakeholders approve the solution.
- UAT Sign-off has been received.

24.5 User Acceptance Test Scenarios

Test ID	Test Scenario	Expected Result	Status
UAT-001	User logs into the system	User is successfully logged in	Pass
UAT-002	Customer creates a new support ticket	Ticket is created with a unique Ticket ID	Pass
UAT-003	Support Agent updates ticket status	Updated status is displayed successfully	Pass
UAT-004	Manager assigns ticket to an agent	Ticket is assigned successfully	Pass
UAT-005	Customer tracks ticket status	Latest ticket status is displayed	Pass
UAT-006	Manager generates support report	Report is generated successfully	Pass

24.6 UAT Sign-off

The Customer Ticket Management System has successfully passed User Acceptance Testing. All agreed business requirements have been validated, and stakeholders have approved the solution for production deployment.

REQUIREMENT TRACEABILITY MATRIX (RTM)

25.1 Overview

The Requirement Traceability Matrix (RTM) is used to ensure that every business requirement is mapped to its corresponding user story, functional requirement, development task, and test case. It helps maintain complete traceability throughout the Software Development Life Cycle (SDLC) and ensures that all requirements are implemented, tested, and validated before deployment.

25.2 Objectives

- Ensure all business requirements are traceable throughout the project lifecycle.
- Verify that every requirement is implemented and tested.
- Prevent missing or overlooked requirements.
- Support impact analysis when changes occur.
- Improve overall project quality and requirement coverage.

25.3 Requirement Traceability Matrix

Requirement ID	Business Requirement	User Story ID	Test Case ID	Status
BR-001	User should be able to log into the system	US-001	TC-001	Completed
BR-002	Customer should be able to create a support ticket	US-002	TC-002	Completed
BR-003	Support Agent should update ticket status	US-003	TC-003	Completed
BR-004	Manager should assign tickets to agents	US-004	TC-004	Completed
BR-005	Customer should be able to track ticket status	US-005	TC-005	Completed
BR-006	System should send ticket notifications	US-006	TC-006	Completed
BR-007	Manager should generate reports	US-007	TC-007	Completed
BR-008	Admin should manage user accounts	US-008	TC-008	Completed

RISKS & ASSUMPTIONS

26.1 Risks

The following potential risks have been identified for the Customer Ticket Management System (CTMS) project:

Risk ID	Risk Description	Impact	Mitigation Strategy
R-001	Changing business requirements during development	High	Conduct regular backlog refinement and stakeholder reviews
R-002	Delay in development activities	Medium	Monitor sprint progress and resolve blockers promptly
R-003	Incomplete or unclear requirements	High	Perform detailed requirement elicitation and validation sessions
R-004	User resistance to the new system	Medium	Provide user training and awareness sessions
R-005	Defects identified during UAT	Medium	Prioritize defect resolution before production deployment

26.2 Assumptions

The project is based on the following assumptions:

- Business requirements are finalized and approved before development begins.
- Stakeholders are available for requirement clarification and feedback.
- Development and testing resources are available throughout the project.
- Required infrastructure and environments are available.
- End users will participate in User Acceptance Testing (UAT).

26.3 Risk Management Approach

Project risks will be reviewed regularly during sprint planning and sprint review meetings. Identified risks will be documented, prioritized based on their impact, and appropriate mitigation strategies will be implemented to minimize their effect on project delivery.

FUTURE ENHANCEMENTS

27.1 Overview

The initial release of the Customer Ticket Management System (CTMS) focuses on delivering the core functionalities required for efficient ticket management. In future releases, additional features can be introduced to further enhance user experience, automation, and operational efficiency.

27.2 Proposed Enhancements

Enhancement	Description	Priority
AI Chatbot Integration	Enable automated responses for common customer queries	Medium
Live Chat Support	Allow customers to communicate with support agents in real time	Medium
Mobile Application	Provide Android and iOS applications for customers and support teams	High
WhatsApp & Email Integration	Enable ticket creation and updates through WhatsApp and Email	High
Advanced Analytics Dashboard	Provide detailed reports and business insights	Medium
Predictive Ticket Routing	Automatically assign tickets based on priority and workload	Low
Customer Feedback & Rating	Allow customers to rate support services after ticket resolution	High
Third-Party CRM Integration	Integrate CTMS with CRM platforms such as Salesforce or Zoho CRM	Low

CONCLUSION

The Customer Ticket Management System (CTMS) was developed using Agile Scrum principles to improve customer support through efficient ticket management. This document outlines the key Business Analysis deliverables, including user stories, sprint planning, wireframes, UAT, and RTM, providing a structured foundation for successful project implementation.

APPENDICES

30.1 Glossary

Term	Definition
CTMS	Customer Ticket Management System
Product Owner	Represents stakeholder interests and prioritizes the product backlog.
Scrum Master	Facilitates Agile practices and removes project impediments.
Sprint	A time-boxed iteration in Agile Scrum used to deliver product increments.
User Story	A short description of a feature from the end user's perspective.
UAT	User Acceptance Testing.
RTM	Requirement Traceability Matrix.
